Treatment of Chronic Elbow Tendinosis With Buffered Platelet-Rich Plasma

Allan Mishra, MD* and Terri Pavelko, PAC, PT

dd6cfc141fb88a57118a77366722d63_1646876605_0656.jpg control

Figure 2. Visual analog pain scores for the group treated with platelet-rich plasma (PRP) and the control group.

Figure 4. Mean pain scores of patients treated with platelet-rich plasmas (PRP).

Control Group: 17.6% vs **PRP Group: 62.5%**

PRP treatment lowered pain scores of elbow tendinosis
from 80.3 to 15.07 in 6 months, **for an improvement of 81%**.
